

CHAPTER V

CONCLUSION

A. Conclusion

After having conducted the research, the researcher draws a conclusion based on the discussion. There is a difference in experimental and control class. It is showed the mean of experimental class is higher than control class ($81.42 > 76.66$). On the other hand, the test of hypothesis using t-test formula shows the value of the t-test is higher than the value of the t-table. The value of t-test is 2.726, while the value of t-table on $\alpha = 5\%$ is 1.67 ($2.726 > 1.67$). The hypothesis is accepted. It can be concluded, that Circle the Sage technique is effective to teach degrees of comparison.

B. Suggestions

The problem that the teacher may face in her duty was how to promote the students interest to join the learning process well. If students have high interest in following the teacher, it would not be so difficult for the teacher to teach the lesson. Based on the hold result of the study, the writer

had some suggestions for English teacher, students and next researcher as follow:

1. For the English Teacher
 - a. Circle the sage technique as a technique of grouping students can make students active and the learning enjoyable. Then, the English teacher better to use fun technique in the teaching learning process.
 - b. The teacher should demonstrate well to the students how to do circle the sage technique and group the ideas that has collected, so that the goal of the study can be fulfilled.
2. For the Students
 - a. The students should encourage themselves to learn English especially Degrees of comparison.
 - b. The students should pay attention to the teacher while the teaching learning process has begun.
3. For the next researcher

This study can be reference for other researcher to conduct a research on the same field. They are also expected to be able to cover the limitation about this, they can conduct a research with the same technique but in different genres or in opposite way. The writer hopes that the next researchers can prepare everything

as good as possible in doing research and can follow up this research.

Finally, the writer realizes that this paper is less perfect. So, the researcher needs the constructive critics and advices to make it perfect. The researcher hopes this thesis will be useful for all. Aamiin.
