## CHAPTER IV <br> RESEARCH FINDINGS AND ANALYSIS

## A. Description of the Result Research

To find out the effectiveness of word find puzzle between the students who were taught by using word find puzzle and the students who were not taught by using word find puzzle on common noun, especially in SDN 03 Tengengwetan Siwalan Kab. Pekalongan the writer did an analysis of quantitative data. The data was obtained by giving test to the experimental class and control class after giving a different learning both classes.

The subjects of this research were divided into two classes. They are experimental class (V B) and control class (V A) of SDN 03 Tengenwetan. Before the activities were conducted, the writer determined the materials and lesson plan of learning. Learning in the experiment class used word find puzzle, while the control class without used word find puzzle.

After the data were collected, the writer analyzed it. The first analysis data is from the beginning of control class and experimental class that is taken from the pre test value. It is the normality test and homogeneity test. It is used to know that two groups are normal and have same variant. Another analysis data is from the ending of control class and experimental class. It is used to prove the truth of hypothesis that has been planned.

## B. The Data Analysis and Test of Hypothesis

1. The Data Analysis
a. The Data Analysis of Pre-Test Value of the Experimental class and the Control Class.

Table 1
The list of Pre-Test Value of
The Experimental and Control Classes

| No | Code | Experiment | Code | Control |

|  | S | 9.472 |  | 8.667 |

1) The Normality Pre-test of the Experimental Class

The normality test is used to know whether the data obtained is normally distributed or not. Based on the table above, the normality test:

Hypothesis:
Ha: The distribution list is normal.

Ho: The distribution list is not normal

## Test of hypothesis:

The formula is used:

$$
X^{2}=\sum_{i=1}^{k} \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}
$$

The computation of normality test:

| Length of the class | $=4.666 \sim 5$ |
| :--- | :--- |
| Maximum score | $=68$ |
| Minimum score | $=40$ |
| K / Number of class | $=5.29 \sim 6$ |
| Range | $=28$ |

## Table 2

Distribution value of pre test of experiment class

| Class <br> interval | $\mathrm{f}_{\mathrm{i}}$ | $X_{\mathrm{i}}$ | $X_{\mathrm{i}}^{2}$ | $f_{i} \cdot X_{\mathrm{i}}$ | $f_{i} \cdot X_{\mathrm{i}}^{2}$ |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $40-44$ | 4 | 42 | 1764 | 168 | 7056 |  |  |  |  |  |  |
| $45-49$ | 4 | 47 | 2209 | 188 | 8836 |  |  |  |  |  |  |
| $50-54$ | 2 | 52 | 2704 | 104 | 5408 |  |  |  |  |  |  |
| $55-59$ | 2 | 57 | 3249 | 114 | 6498 |  |  |  |  |  |  |
| $60-64$ | 5 | 62 | 3844 | 310 | 19220 |  |  |  |  |  |  |
| $65-69$ | 3 | 67 | 4489 | 201 | 13467 |  |  |  |  |  |  |
| Total |  |  |  |  |  |  | 20 |  |  | 1085 | 60485 |

$\bar{X}=\frac{\sum f i x i}{\sum f i}=\frac{1085}{20}=54.25$
$\mathrm{s}^{2}=\frac{n \sum f i . x i^{2}-\left(\sum f i x i\right)^{2}}{n(n-1)}=\frac{20 * 60485-(1085)^{2}}{20(59-1)}$
$\mathrm{s}^{2}=85.461$
$\mathrm{s}=9,244$

Table 3
Observation frequency value of pre test
Of experiment class

| Class interval | Bk | Zi | $\mathrm{P}(\mathrm{Zi})$ | size class | Ei | Oi | $\frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}$ |
| :---: | ---: | ---: | ---: | ---: | :--- | ---: | ---: |
|  | 39.5 | -1.60 | 0.4452 |  |  |  |  |
| $40-44$ |  |  |  | 0.0921 | 1.842 | 4 | 2.528211 |
|  | 44.5 | -1.05 | 0.3531 |  |  |  |  |
| $45-49$ |  |  |  | 0.1581 | 3.162 | 4 | 0.222089 |
|  | 49.5 | -0.51 | 0.195 |  |  |  |  |
| $50-54$ |  |  |  | 0.183 | 3.66 | 2 | 0.752896 |
|  | 54.5 | 0.03 | 0.012 |  |  |  |  |
| $55-59$ |  |  |  | 0.2037 | 4.074 | 2 | 1.055836 |
|  | 59.5 | 0.57 | 0.2157 |  |  |  |  |
| $60-6$ |  |  |  | 0.1508 | 3.016 | 5 | 1.305125 |
|  | 64.5 | 1.11 | 0.3665 |  |  |  |  |
| $65-69$ |  |  |  | 0.084 | 1.68 | 3 | 1.037143 |
|  | 69.5 | 1.65 | 0.4505 |  |  |  |  |
|  |  |  |  |  |  |  | 6.901299 |
|  |  |  |  |  |  |  |  |

With $\alpha=5 \%$ and $\mathrm{dk}=6-3=3$, from the chi-square distribution table, obtained $X_{\text {table }}=7.815$. Because $X^{2}$ count is lower than $X^{2}{ }_{\text {table }}(6.901<7.815)$. So, the distribution list is normal.
2) The Normality Pre-Test of the Control Class

## Hypothesis:

Ho: The distribution list is normal.
Ha: The distribution list is not normal.

## Test of hypothesis:

The formula is used:
: $\chi^{2}=\sum_{i=1}^{k} \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}$
The computation of normality test:
Maximum score $=68$

| Minimum score | $=40$ |
| :--- | :--- |
| Range | $=28$ |
| K/ Number of class | $=5.29 \sim 6$ |
| Length of the class | $=4.666 \sim 5$ |

## Table 4

Distribution value of pre test of control class

| Class <br> interval | $\mathrm{f}_{\mathrm{i}}$ | $X_{\mathrm{i}}$ | $X_{\mathrm{i}}^{2}$ | $f_{i} \cdot X_{\mathrm{i}}$ | $f_{i} \cdot X_{\mathrm{i}}^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $40-44$ | 4 | 42 | 1764 | 168 | 7056 |
| $45-49$ | 4 | 47 | 2209 | 188 | 8836 |
| $50-54$ | 4 | 52 | 2704 | 208 | 10816 |
| $55-59$ | 2 | 57 | 3249 | 114 | 6498 |

|  | 39.5 | -1.58 | 0.4429 |  |  |  |  |

| $40-44$ |  |  |  | 0.1016 | 2.032 | 4 | 1.906015748 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 44.5 | -1.00 | 0.3413 |  |  |  |  |
| $45-49$ |  |  |  | 0.1822 | 3.644 | 4 | 0.034779363 |
|  | 49.5 | -0.41 | 0.1591 |  |  |  |  |
| $50-54$ |  |  |  | 0.0877 | 1.754 | 4 | 2.876006842 |
|  | 54.5 | 0.18 | 0.0714 |  |  |  |  |
| $55-59$ |  |  |  | 0.205 | 4.1 | 2 | 1.075609756 |
|  | 59.5 | 0.76 | 0.2764 |  |  |  |  |
| $60-64$ |  |  |  | 0.1351 | 2.702 | 4 | 0.6235396 |
|  | 64.5 | 1.35 | 0.4115 |  |  |  |  |
| $65-69$ |  |  |  | 0.0623 | 1.246 | 2 | 0.456272873 |
|  | 69.5 | 1.94 | 0.4738 |  |  |  |  |
|  |  |  |  |  |  |  | 6.972224182 |
| X tabel | 7.815 |  |  |  |  |  |  |

With $\alpha=5 \%$ and $\mathrm{dk}=6-3=3$, from the chi-square distribution table, obtained $X_{\text {table }}=7.815$. Because $X^{2}$ count is lower than $X^{2}{ }_{\text {table }}(6.9722<7.815)$. So, the distribution list is normal.
3) The Homogeneity Pre-Test of the Experimental Class

Hypothesis:

$$
\begin{aligned}
& H_{o}: \sigma_{1}^{2}=\sigma_{2}^{2} \\
& H_{A}: \sigma_{1}^{2} \neq \sigma_{2}^{2}
\end{aligned}
$$

## Test of hypothesis:

The formula is used:

$$
F=\frac{\text { Biggest var iant }}{\text { smallest var iant }}
$$

The Data of the research:

| Variant | Experimental | Control |
| :---: | :---: | :---: |
| Total | 1092 | 1056 |
| N | 20 | 20 |
| $\bar{X}$ | 54.60 | 52.80 |
| Variant $\left(\mathrm{S}^{2}\right)$ | 85.378 | 75.117 |
| Standard deviasi $(\mathrm{S})$ | 9.472 | 8.667 |

Based on the formula, it is obtained:
$F=\frac{85.378}{75.117}=\quad 1,137$
With $\alpha=5 \%$ and dk $=(20-1=19):(20-1=19)$, obtained $F_{\text {table }}$
$=2.15$. Because $F_{\text {count }}$ is lower than $F_{\text {table }}(1,137<2.15)$. So, Ho is accepted and the two groups have same variant / homogeneous.
4) The average of similarity Test of Pre-Test of Experimental and Control Classes.

## Hypothesis:

Ho: $\mu_{1}=\mu_{2}$
На: $\mu_{1} \neq \mu_{2}$

## Test of hypothesis:

Based on the computation of the homogeneity test, the experimental class and control class have same variant. So, the $t$-test formula:

$$
t=\frac{\overline{x_{1}}-\overline{x_{2}}}{S \sqrt{\frac{1}{n_{1}}+\frac{1}{n_{2}}}}
$$

$$
S=\sqrt{\frac{\left(n_{1}-1\right) S_{1}^{2}+\left(n_{2}-1\right) S_{2}^{2}}{n_{1}+n_{2}-2}}
$$

## The data of the research:

| Variant | Experiment | Control |
| :---: | :---: | :---: |
| Jumlah | 1092 | 1056 |
| $\frac{\mathrm{n}}{X}$ | 20 | 20 |
| Variant $\left(\mathrm{S}^{2}\right)$ | 54.60 | 52.80 |
| Standard deviasi (S) | 85.378 | 75.117 |

$$
\begin{aligned}
& S=\sqrt{\frac{\left(n_{1}-1\right) S_{1}^{2}+\left(n_{2}-1\right) S_{2}^{2}}{n_{1}+n_{2}-2}} \\
& S=\sqrt{\frac{(20-1) 85.378+(20-1) 75.117}{20+20-2}}=9.078
\end{aligned}
$$

So, the computation t-test:
$t=\frac{\overline{x_{1}}-\overline{x_{2}}}{S \sqrt{\frac{1}{n_{1}}+\frac{1}{n_{2}}}}=\frac{54.60-52.80}{9.078 \sqrt{\frac{1}{20}}+\frac{1}{20}}=0.627$
With $\alpha=5 \%$ and dk $=20+20-2=38$, obtained $t_{\text {table }}=2.02$ (two tails). Because $t_{\text {count }}$ is lower than $t_{\text {table }}(0.627<2.02)$. So, Ho is accepted and there is no difference of the pre test average value from both groups.

## b. The Data Analysis of Post-Test Value in Experimental Class and Control Class.

Table 6
The List of the Post Test Value of the Experimental
And Control Classes

| No | Code | Experiment | Code | Control |
| :---: | :---: | :---: | :---: | :---: |
| 1 | E-01 | 84 | C-01 | 72 |
| 2 | E-02 | 76 | C-02 | 60 |
| 3 | E-03 | 68 | C-03 | 56 |
| 4 | E-04 | 76 | C-04 | 44 |
| 5 | E-05 | 76 | C-05 | 56 |
| 6 | E-06 | 60 | C-06 | 68 |
| 7 | E-07 | 84 | C-07 | 56 |
| 8 | E-08 | 72 | C-08 | 72 |
| 9 | E-09 | 76 | C-09 | 68 |
| 10 | E-10 | 60 | C-10 | 52 |
| 11 | E-11 | 84 | C-11 | 68 |
| 12 | E-12 | 64 | C-12 | 68 |

|  | n | 20 | 20 |  |
|  | $\mathrm{~S}^{2}$ | 79.995 | 79.62 |  |
|  | S | 8.944 | 8.923 |  |

1) The Normality Post-Test of the Experimental Class

Based on the table above, the normality test:

## Hypothesis :

Ho : The distribution list is normal.
$\mathrm{Ha} \quad$ : The distribution list is not normal.

## Test of hypothesis:

The formula is used:
$\chi^{2}=\sum_{i=1}^{k} \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}$
The computation of normality test:

| Maximum score | $=88$ |
| :--- | :--- |
| Minimum score | $=60$ |
| Length of the class | $=4.66 \sim 5$ |
| Range | $=28$ |
| K/ Number of class | $=5.29 \sim 6$ |

## Table 7

Distribution value Post Test of the Experimental Class

| Kelas | $\mathrm{f}_{\mathrm{i}}$ | $X_{\mathrm{i}}$ | $X_{\mathrm{i}}{ }^{2}$ | $f_{i} \cdot X_{\mathrm{i}}$ | $f_{i} \cdot X_{\mathrm{i}}{ }^{2}$ |

| $75-79$ | 5 | 77 | 5929 | 385 | 29645 |
| $80-84$ | 5 | 82 | 6724 | 410 | 33620 |
| $85-89$ | 1 | 87 | 7569 | 87 | 7569 |
| Jumlah | 20 |  | 33739 | 1475 | 110045 |

$$
\begin{aligned}
& \bar{X}=\frac{\sum f i x i}{\sum f i}=\frac{1475}{20}=73.75 \\
& \mathrm{~s}^{2}=\frac{n \sum f i . x i^{2}-\left(\sum f i x i\right)^{2}}{n(n-1)}=\frac{20 * 110045-(1475)^{2}}{20(20-1)} \\
& \mathrm{s}^{2}=66.51 \\
& \mathrm{~s}=8.15
\end{aligned}
$$

Table 8
Observation frequency value of post test
Of experiment class

| class <br> interval | Bk | Zi | $\mathrm{P}(\mathrm{Zi})$ | size class | Ei | Oi | $\frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}$ |
| ---: | :--- | ---: | :--- | :--- | :--- | :--- | :--- |
|  | 59.5 | -1.75 | 0.4599 |  |  |  |  |
| $60-64$ |  |  |  | 0.0891 | 1.782 | 4 | 2.76067565 |
|  | 64.5 | -1.13 | 0.3708 |  |  |  |  |
| $65-69$ |  |  |  | 0.1723 | 3.446 | 3 | 0.05772374 |
|  | 69.5 | -0.52 | 0.1985 |  |  |  |  |
| $70-74$ |  |  |  | 0.1626 | 3.252 | 2 | 0.4820123 |
|  | 74.5 | 0.09 | 0.0359 |  |  |  |  |
| $75-79$ |  |  |  | 0.2253 | 4.506 | 5 | 0.05415801 |
|  | 79.5 | 0.71 | 0.2612 |  |  |  |  |
| $80-84$ |  |  |  | 0.1454 | 2.908 | 5 | 1.50497387 |
|  | 84.5 | 1.32 | 0.4066 |  |  |  |  |
| $85-89$ |  |  |  | 0.0666 | 1.332 | 1 | 0.08275075 |
|  | 89.5 | 1.93 | 0.4732 |  |  |  |  |
|  |  |  |  |  |  |  | 4.94229431 |
| $X$ tabel | 7.815 |  |  |  |  |  |  |

With $\alpha=5 \%$ and $\mathrm{dk}=6-3=3$, from the chi-square distribution table, obtained $X_{\text {table }}=7.815$. Because $X^{2}{ }_{\text {count }}$ is lower than $X_{\text {table }}^{2}(4.942<7.815)$. So, the distribution list is normal.
2) The Normality Post-Test of the Control Class

Hypothesis: Ho : The distribution list is normal
$\mathrm{Ha} \quad$ : The distribution list is not normal

## Test of hypothesis:

The formula is used:

$$
\chi^{2}=\sum_{i=1}^{k} \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}
$$

The computation of normality test:

| Maximum score | $=72$ |
| :--- | :--- |
| Minimum score | $=44$ |
| Range | $=28$ |
| K/many class interval | $=5.29 \sim 6$ |
| Length of the class | $=4.66 \sim 5$ |

| $59-63$ |  |  |  | 0.1815 | 3.63 | 3 | 0.109339 |
|  | 63.5 | 0.54 | 0.2054 |  |  |  |  |
| $64-68$ |  |  |  | 0.1675 | 3.35 | 6 | 2.096269 |
|  | 68.5 | 1.14 | 0.3729 |  |  |  |  |
| $69-73$ |  |  |  | 0.0862 | 1.724 | 2 | 0.044186 |
|  | 73.5 | 1.74 | 0.4591 |  |  |  |  |
|  |  |  |  |  |  |  | 4.37495 |
| X tabel 7.815 |  |  |  |  |  |  |  |

With $\alpha=5 \%$ and $\mathrm{dk}=6-3=3$, from the chi-square distribution table, obtained $X_{\text {table }}=7.815$. Because $X^{2}$ count is lower than $X_{\text {table }}^{2}(4.37<7.815)$. So, the distribution list is normal.
3) The Homogeneity Post-Test of the Experimental Class

## Hypothesis :

$H_{o}: \sigma_{1}^{2}=\sigma_{2}^{2}$
$H_{A}: \sigma_{1}^{2} \neq \sigma_{2}^{2}$

## Test of hypothesis:

The formula is used:
$F=\frac{\text { Biggest variant }}{\text { smallest variant }}$

## The Data of the research:

| Variant | Experimental | Control |
| :---: | :---: | :---: |
| Total | 1480 | 1188 |
| N | 20 | 20 |
| $\bar{X}$ | 74.00 | 59.40 |
| Variant $\left(\mathrm{S}^{2}\right)$ | 79.995 | 79.620 |
| Standard deviasi $(\mathrm{S})$ | 8.944 | 8.923 |

Biggest variant $(\mathrm{Bv})=79.995$
Smallest variant $(\mathrm{Sv})=79.620$
$\mathrm{n}_{1}=20$
$\mathrm{n}_{2}=20$
Based on the formula, it is obtained:
$F=\frac{79.995}{79.620}=1.005$
With $\alpha=5 \%$ and $\mathrm{dk}=(20-1=19):(20-1=19)$, obtained $F_{\text {table }}=2.15$. Because $F_{\text {count }}$ is lower than $F_{\text {table }}(1.005<2.15)$. So, Ho is accepted and the two groups have same variant/ homogeneous.

## 2. The Hypothesis Test

The hypotheses in this research is a significance difference in noun test score between students taught using word find puzzle and those taught using non-word find puzzle.

In this research, because $\sigma_{1}{ }^{2}=\sigma_{2}{ }^{2}$ (has same variant), the $t$-test formula is as follows:

$$
t=\frac{\overline{x_{1}}-\overline{x_{2}}}{S \sqrt{\frac{1}{n_{1}}+\frac{1}{n_{2}}}} \quad S=\sqrt{\frac{\left(n_{1}-1\right) S_{1}^{2}+\left(n_{2}-1\right) S_{2}^{2}}{n_{1}+n_{2}-2}}
$$

## The data of the research:

| Variant | Experiment | Control |
| :---: | :---: | :---: |
| Total | 1480 | 1188 |
| n | 20 | 20 |
| $\bar{X}$ | 74.00 | 59.40 |
| Variant $\left(\mathrm{s}^{2}\right)$ | 79.995 | 79.620 |
| Standard deviasi $(\mathrm{s})$ | 8.944 | 8.923 |

$$
\begin{aligned}
& S=\sqrt{\frac{\left(n_{1}-1\right) S_{1}^{2}+\left(n_{2}-1\right) S_{2}^{2}}{n_{1}+n_{2}-2}} \\
& S=\sqrt{\frac{(20-1) 79.995+(20-1) 79.62}{20+20-2}}=8.933
\end{aligned}
$$

So, the computation t-test:

$$
t=\frac{\overline{x_{1}}-\overline{x_{2}}}{S \sqrt{\frac{1}{n_{1}}+\frac{1}{n_{2}}}}=\frac{74.00-59.40}{8.933 \sqrt{\frac{1}{20}}+\frac{1}{20}}=5.171
$$

With $\alpha=5 \%$ and $\mathrm{dk}=20+20-2=38$, obtained $t_{\text {table }}=1.68$ (one tail). Because $t_{\text {count }}$ is higher than $t_{\text {table }}(1.68<5.171)$. So, Ho is accepted and there is no difference of the pre test average value from both groups.

From the computation above, the t -table is 1.68 (one tail) by $5 \%$ alpha level of significance and $\mathrm{dk}=20+20-2=38$. T-value was 5.171. So, the t -value was higher than the critical value on the table ( $5.171>1.68$ ).

From the result, it can be concluded that using word find puzzle is more effective than without using word find puzzle in teaching common noun. The hypothesis is accepted.

## C. Discussion of Research Finding

The result of the research shows that the experimental class (the students who are taught using word find puzzle) has the mean value pretest was 54.60 and post-test was 74.00 . While the control class (the
students who are taught without using word find puzzle) has the mean value pre-test was 52.80 and post-test was 59.40.

On the other hand, the test of hypothesis using t-test formula shows the value of the $t$-test is higher than the critical value. The value of t -test is 5.171 , while the critical value on $t_{s 0,05}$ is 1.68 (one tail). It means that using word find puzzle more effective than without using word find puzzle in teaching common noun.

## D. Limitation of the Research

The writer realizes that this research had not been done optimally. There were constraints and obstacles faced during the research process. Some limitations of this research are:

1. Relative short time of research makes this research could not be done maximum.
2. The research is limited at SDN 03 Tengengwetan Kab. Pekalongan. So that when the same research will be gone in other schools, it is still possible to get different result.
3. The implementation of the research process was less perfect. Because short time of this research, so the assessment was conducted not only based on the material given in the class but also the assignments or exercises given to students' homework on nouns.

Considering all those limitations, there is a need to do more research about teaching common noun using word find puzzle. So that, the more optimal result will be gained.
