## CHAPTER IV

## RESEARCH FINDING AND DISCUSSION

In this chapter discusses Finding, Hypothesis test, Discussion, Limitation of the Research.

## A. Research Finding

The result from data collection technique is be a measurement in students' Speaking English motivation. The main data collection technique that used is questionnaire that were shared to 58 participants, 29 participants from natural science program and 29 from social science program. This questionnaire aimed to 8 indicators ${ }^{1}$ of motivation. they have been explained at chapter III. These indicators were presented by questions that amount 16 , so one indicator contains 2 questions.

The questions are detemined in multiple choice with 5 alternative answers, they are a, b, c, d, and e. For analysis requirement, each alternative answer had certain score. They are:

- $\quad$ Score 5 for the respondents who choose item ' $a$ '
- $\quad$ Score 4 for the respondents who choose item ' $b$ '
- $\quad$ Score 3 for the respondents who choose item ' $c$ '
- $\quad$ Score 2 for the respondents who choose item ' $d$ '
- $\quad$ Score 1 for the respondents who choose item ' e , ${ }^{2}$

Counting for this score, the highest score is $5 \times 16=80$, and the lowest score is $0 \times 16=0$. It is used to know where class has good motivation. In this case used Likert Scale.

The data is a description in statistical data calculation. We can see the student's motivation in learning speaking English as follow:

[^0]Table 1
The Table of Natural Science Program Students' Motivation Score in Learning Speaking English

## B. Hypothesis Test

Natural science and social science program students' motivation score which is counted base on the table I and II to find out the differences.

Table III
The Table of Natural Science Program and Social Science Program Motivation Score of XI Grade Students at MAN Bawu Jepara

| No | $\mathbf{X}$ | $\mathbf{X}^{\mathbf{2}}$ | $\mathbf{Y}$ | $\mathbf{Y}^{\mathbf{2}}$ |
| :--- | :--- | :--- | :--- | :--- |
| 1 | 35 | 1225 | 30 | 900 |
| 2 | 36 | 1296 | 35 | 1225 |
| 3 | 40 | 1600 | 36 | 1296 |
| 4 | 42 | 1764 | 37 | 1369 |
| 5 | 46 | 1764 | 40 | 1600 |
| 6 | 2116 | 42 | 1764 |  |

| 7 | 49 | 2401 | 42 | 1764 |

| 8 | 51 | 2601 | 43 | 1849 |
| 9 | 53 | 2809 | 44 | 1936 |
| 10 | 53 | 2809 | 45 | 2025 |
| 11 | 53 | 2809 | 45 | 2025 |
| 12 | 53 | 2809 | 45 | 2025 |
| 13 | 54 | 2916 | 46 | 2116 |
| 14 | 55 | 3025 | 46 | 2116 |
| 15 | 55 | 3025 | 46 | 2116 |
| 16 | 55 | 3025 | 46 | 2116 |
| 17 | 56 | 3136 | 48 | 2304 |
| 18 | 56 | 3136 | 48 | 2304 |
| 19 | 56 | 3136 | 49 | 2401 |
| 20 | 60 | 3600 | 49 | 2401 |
| 21 | 60 | 3600 | 51 | 2601 |
| 22 | 60 | 3600 | 51 | 2601 |
| 23 | 60 | 3600 | 52 | 2704 |
| 24 | 61 | 3721 | 53 | 2809 |
| 25 | 61 | 3721 | 54 | 2916 |
| 26 | 63 | 3969 | 55 | 3025 |

| 27 | 63 | 3969 | 57 | 3249 |
| :--- | :--- | :--- | :--- | :--- |
| 28 | 67 | 4489 | 60 | 3600 |
| 29 | 68 | 4624 | 62 | 3844 |
| $\sum$ | 1563 | 86295 | $\sum \mathrm{x}^{2}=$ | $\mathrm{Y}=$ |
| 1357 | $\mathrm{y}^{2}=$ <br> 65001 |  |  |  |

a) Determining Mean of Each Variable

Based on scores above, then are able to determine mean of each variable.

| $\sum \mathrm{X}$ | $\sum \mathrm{Y}$ |
| :---: | :---: |
| $n$ | $n$ |
| 1563 | 1357 |
| 29 | 29 |
| $=53,89655$ | $=46,7931$ |

b) Determining Variance and Standard Deviation

How far value of perception that spread around value of mean is named variation. Variation measure is many types, but which is often used is variance and standard deviation.

If a set of reseaarch $\mathrm{X} 1, \mathrm{X} 2, \ldots, \mathrm{Xn}$ has a mean $\overline{\mathrm{X}}$, then the variance is
$\mathrm{V}_{\mathrm{x}}=\frac{\sum\left(\mathrm{X}_{\mathrm{i}}-\overline{\mathrm{X}}\right)^{3}}{\mathrm{n}-1}$
where,
$\mathrm{X}_{\mathrm{i}}=$ observation score of variable i
$\overline{\mathrm{X}}=$ mean
$\mathrm{V}_{\mathrm{x}}=$ variance
In working daily, variance is looked for with the formula below, which is the other way in writing the formula for variance.

$$
\mathrm{V}_{\mathrm{x}}=\frac{\mathrm{n} \sum \mathrm{Xi}^{2}-\left(\sum \mathrm{Xi}\right)^{2}}{\mathrm{n}(\mathrm{n}-\mathrm{n} 1)}
$$

Based on Table III above, the table of natural science program and social science program motivation score of XI grade students at MAN Bawu Jepara and mean, then looks for . . . .

1) Varians of natural science program.

$$
\begin{aligned}
& \sum \mathrm{X}_{\mathrm{i}}=1563 \\
& \sum \mathrm{Xi}^{2}=86295 \\
& \left(\sum \mathrm{X}_{\mathrm{i}}\right)^{2}=1563^{2}=2442969 \\
& \overline{\mathrm{X}}=\stackrel{1563}{ }=53,89655
\end{aligned}
$$

29

[^1]\[

$$
\begin{aligned}
\mathrm{V}_{\mathrm{x}} & =\frac{\mathrm{n} \mathrm{\sum Xi}^{2}-\left(\sum \mathrm{Xi}\right)^{2}}{\mathrm{n}(\mathrm{n}-\mathrm{n} 1)} \\
\mathrm{V}_{\mathrm{x}} & =\frac{29(86295)-2442969}{29(29-1)} \\
& =\frac{59586}{812}=73,38177
\end{aligned}
$$
\]

So, mean of natural science program XI Grade motivation is 53,89655 and variance from motivation is 73,38177 .

Standard deviation is square root of variance, so

$$
\begin{aligned}
S & =\sqrt{V \mathrm{Vx}} \\
& =\sqrt{73,38177} \\
& =\sqrt{8,5663}
\end{aligned}
$$

Where,
$\mathrm{n}=$ sum of observation
$\mathrm{s}=$ standard deviation
2) Varians of social science program.

$$
\begin{aligned}
& \sum \mathrm{Xi}_{\mathrm{i}}=1357 \\
& \sum \mathrm{Xi}^{2}=65001 \\
& \left(\sum \mathrm{X}_{\mathrm{i}}\right)^{2}=(1357)^{2}=1841449
\end{aligned}
$$

$$
\begin{gathered}
\bar{X}=\frac{1357}{29}=46,79310344 \\
V_{x}=\frac{n \sum X_{i}^{2}-\left(\sum X_{i}\right)^{2}}{n(n-n 1)} \\
=\frac{29(65001)-1841449}{29(29-1)} \\
53,66995073
\end{gathered}
$$

So, mean of social science program XI Grade motivation is 46,79310344 and variance from motivation is 53,66995073.

Standard deviation is square root of variance, so

$$
\begin{aligned}
S & =\sqrt{V x} \\
& =\sqrt{53,66995073} \\
& =\sqrt{7,32598}
\end{aligned}
$$

Where,
$\mathrm{n}=$ sum of observation
$\mathrm{s}=$ standard deviation
c) To Determine Standard Deviation of Each Variable

$$
\mathrm{SD} 2=\frac{\sum \mathrm{x}^{2}}{\mathrm{~N}}-\mathrm{Mx}^{2}
$$

$$
\begin{aligned}
& 86295 \\
& =-53,89655^{2} \\
& 29 \\
& =2975,6897-2904,8381 \\
& =70,8516 \\
& \sum \mathrm{y}^{2}-\mathrm{My}^{2} \\
& \text { N } \\
& 65001 \\
& =29-46,7931^{2} \\
& =2241,4138-2189,5942 \\
& =51,8196 \\
& \text { d) To Determine Standard Error of Mean }{ }^{5} \\
& \text { e) To Determine Standard Error Difference of Mean } \\
& \mathrm{SDbm}=\sqrt{S D 2 M x+S D 2 M y} \\
& =2,5304+1.8507
\end{aligned}
$$

[^2]$=\sqrt{4,3811}$
= 2,0931
f) Determining t Test with Formula Below
$$
t=\frac{M x-M y}{S D b m}
$$

## 53,8966-46,7931

$=\frac{2,0931}{}$
7, 1035
$=$
2,0931
$==3,394$
g) Measuring Degree of Freedom by $\mathrm{df}=\mathrm{n}_{1}+\mathrm{n}_{2}-2$

In determining both $n_{1}$ and $\boldsymbol{n}_{2}$ are 29 . It is taken from sample

$$
\begin{aligned}
\text { by } \mathrm{df} & =\mathrm{n}_{1}+\mathrm{n}_{2}-2 \\
& =29+29-2 \\
& =56
\end{aligned}
$$

h) Checking the $t_{\text {table }}$ Criteria with Significant Degree $5 \%$

The $\mathrm{t}_{\text {table }}$ with degree of freedom $=56$ in $\alpha 5 \%$ is 2 , 048 . used number 2.048 because it is the closer number with 56 . There is no exact number in table.
i) To get Conclusion

Alternative hypothesis (Ha) is proposed in this research. This hypothesis states there is relationship, it means there is significance relationship between X and Y . So it is "There is significant motivation difference that natural science program is better than social science program in learning speaking English".

Opponent of Ha is Ho. It is called with statistic hypothesis ${ }^{6}$, it is because this hypothesis is examined by statistic. For research, this hypothesis will be tested through zero hypothesis (Ho) test, it is "Nothing significant motivation difference that natural science program is better than social science program in learning speaking English".

Based on the calculation above, it can be concluded that t test is bigger than $t$ table, so the criteria is $3,394>2,048$, therefore Ha accepted.

1) Catagorizing students' motivation for all programs.

Table IV
Whole Scores of Natural Science and Social Science Program Students Motivation. ${ }^{7}$

| No | Name | Score |

| 57 | Siti Muthoharoh | 61 |
| 58 | Ayu Isma Suryani | 30 |
| Total Score | 2906 |  |
|  |  |  |

counted all items to get the ideal score for all. They are $(5 \times 16 \times 58=$ $4640)^{8}$.Meanwhile, the score which is gotten between natural science program and social science program students are $2906(1549+1357) .{ }^{9}$ Thereby, 2906: $4640 \times 100$

[^4]$=62,63 \% .4640$ is highest score. In order be easier to understand, the highest score is divided to be 5 categories. It can be described as follow.

928

2906

Really It can be concluded that the score 2906 is in quite motivation internal category. Truly based on calculation, the students can reach $62,63 \%$ of $100 \%$. So the natural science and social science program students' motivation are quite.
2) Categorizing Students' Motivation for Each Program.

Finding the ideal score for each program is $5 \times 16 \times 29=2320 .{ }^{10}$ Meanwhile the score of natural science program is 1549 and social science program is 1357 . Thereby, 1549: $2320 \times 100=66,77 \%$ for natural science program and 1357: 2320 $x 100=58,49 \%$ for social science program. It can be described as follow.

46413922320

* Explanation

[^5]= Natural Science Program
$=$ Social Science Program (1357)

The diagram shows that natural science program is in quite motivation, it is better than social science program. Actually social science program is in low motivation, it is not better than natural science program.

## C. Discussion

1. Motivation According to Students.

Students' motivation is good for them; they have the answer when they are asked how strong their motivations if it is transferred in daily life, but the students have their own opinion towards its usage. Here the brief analysis of interview results:

## a) Natural Science Program Students

Composing base on the interview result; it showed that the student who is interviewed is very happy in practicing Speaking English directly because she is often study at night. She has some strategies, like memorizing vocabulary, do conversation with friends and often asking to senior.

Another student also feels afraid because of not able. He also feels nervous because he is not familiar with speaking in English daily. His strategy is reading and comprehends the lesson. He also comes to the front with partner.

Another student also feels nervous if doing speaking but she tries to be confident to get good mark. His strategy is doing exercise with natural science program friend.
b) Social science program students based on the interview result, it showed that the student feels difficult to understand speaking English. But sometimes she understands the lesson. The student writes down
material which wants to understand. She also looks for book in the library.

Other students felt shy in studying because producing the voice in front of his friends. He also cannot understand when the teacher taught speaking. The student didn't have the appropriate strategy in teaching speaking in English. Sometimes he wrote down the material.

Another student felt enjoyable, and sometimes she felt difficult. It was because of everything in speaking was difficult. The student's strategy was writing down the difficult word and remembering the teacher's explanation.
c) Based interview with the Mr. Zaini as a teacher on both class. There were no differences in teaching them. Actually the material that given in every semester was same. It based on curriculum that really not different for them in speaking aspect of English.
2. Programs in School according to English Teacher

The teacher of two programs, natural science program and social science program are same. In this school there is no special strategy to develop it, and there is no difference between two programs. But in this school there is ECC (English Conversation Club). It is extracurricular that more practices than just explanation.

Natural Science program's motivation is very good for their achievement. It is different than social science student's program. The natural science program's motivation is very high because they participate in ECC.

Social science program's motivation is bad for their achievement. It is different than natural science student's program. The social science program's motivation is low natural science program because they don't participate in ECC. ${ }^{11}$

[^6]
## D. Limitation of the Research

In doing this research, realized that there were some obstacles mainly the procedures of the school where the research was done. In these activities, it not only spent the money, but also condition of time between research and in finishing study in campus.

Another limitation that has only used sample 58 students in two classes. Not all samples between class of natural science program amounts 2 classes and social science program that amounts 4 classes.
