## CHAPTER IV

ANALYSIS AND RESEARCH FINDING

## A. The Description of Data

The purpose of this research is to measure the effectiveness of the use of words structure clues strategy to improve students' reading quality at Advanced Reading Class at $3^{\text {rd }}$ semester of ELT Department at Tarbiyah and Teacher Training Faculty of IAIN Walisongo Semarang. This research used quantitative methods conducted from $2^{\text {nd }}$ September up to $2^{\text {nd }}$ October 2013. After conducting the research, the researcher got the data of research finding that is obtained by using the test of the experimental class and control class after conducting different treatment of learning process in both classes.

The implementation of this study was divided in two classes, namely the experimental class (TBI 3A) and the control class (TBI 3B). Before the activities were conducted, the writer determined the materials and lesson plan of learning. Learning in the experimental class was conducted by teaching reading using words structure clues strategy, while in the control class without using words structure clues strategy.

Test was given before and after the students followed the learning process that was provided by the writer. After the data were collected, the writer analyzed them to prove the truth of the hypothesis that had been formulated. However, before the analysis was done, first, the writer scored the results of the test that had been given to the
students. The question that was given to students consists of 20 item test.

After the data were collected, the writer analyzed it. The first analysis data is from the beginning of control class and experimental class that is taken from the pretest value. It is the normality test and homogeneity test. It is used to know that two groups are normal and have same variant. Another analysis data is from the ending of control class and experimental class. It is used to prove the truth of hypothesis that has been planned.

## B. Data Analysis And Hypothesis Test

## 1. The Data Analysis

a. The data analysis of try out test finding

This discussion covers validity, reliability, level of difficulty and discriminating power.

1) Validity of Instrument

As mentioned in chapter III, validity refers to the precise measurement of the test. In this study, item validity is used to know the index validity of the test. To know the validity of instrument, the writer used the Pearson product moment formula to analyze each item.

The following is the example of item validity computation for item number 1 and for the other items would use the same formula.

$$
\begin{aligned}
& \mathrm{N}=40 \quad \sum Y=2945 \quad\left(\sum X\right)^{2}=19600 \\
& \sum X Y=11775 \quad \sum X^{2}=700 \\
& \sum X=140 \quad \sum Y^{2}=232475 \\
& r_{x y}=\frac{N \sum X Y-\sum(X) \sum(Y)}{\sqrt{\left\{N \sum X^{2}-\left(\sum X\right)^{2}\right)\left(N \sum Y^{2}-\left(\sum Y\right)^{2}\right\}}} \\
& r_{x y}=\frac{40(11775)-140(2945)}{\sqrt{\{40(700)-19600\}\{40(232475)-8673025\}}} \\
& r_{x y}=\frac{49700}{\sqrt{8400 \times 625975}} \\
& r_{x y}=\frac{49700}{\sqrt{5258190000}} \\
& r_{x y}=0,810
\end{aligned}
$$

From the computation above, the result of computing validity of the item number 1 is 0,810 . After that, the writer consulted the result to the table of $r$ Product Moment with the number of subject ( N ) $=40$ and significance level $5 \%$ it is 0,312 . Since the result of the computation is higher than $r$ in table, the index of validity of the item number 1 is considered to be valid.
2) Reliability of Instrument

A good test must be valid and reliable. Besides the index of validity, the writer calculated the reliability of the test using Alpha formula.

$$
r_{11}=\left|\frac{k}{k-1}\right|\left|1-\frac{\sum \sigma_{i}^{2}}{\sigma_{t}^{2}}\right|
$$

In which:
$r_{11} \quad=$ The reliability coefficient of items
$\sum \sigma_{i}{ }^{2}=$ Total of variants each score items
$\sigma_{t}^{2} \quad=$ Total of variants
$k \quad=$ The number of item in the test
With formula variant item in the test below:

$$
\sigma_{i}^{2}=\left|\frac{\sum X^{2}-\frac{\left(\sum X\right)^{2}}{N}}{N}\right|
$$

Criteria:
If $r_{11}>r_{\text {table }}$ is reliable.
The following is the example of item variant computation for item number 1 and for the other items would use the same formula.
var $=\left|\frac{700-\frac{19600}{40}}{40}\right|$

$$
\text { var }=\left|\frac{750-490}{40}\right|
$$

$$
\operatorname{var}=6.5
$$

$$
\sigma_{i}^{2}=5,250+5,859+5,484+5,484+5,250+4,984+
$$

$$
4,359+5,484+3,188+2,250+4,688+3,609+
$$

$$
5,859+2,734+5,250+5,688+3,609+5,250+
$$

$$
4,688+4,984=93,953
$$

$$
\sigma_{i}^{2}=\left|\frac{\sum Y^{2}-\frac{\left(\sum Y\right)^{2}}{N}}{N}\right|
$$

$$
\sigma_{i}^{2}=\left|\frac{232475-\frac{8673025}{40}}{40}\right|
$$

$$
\sigma_{i}^{2}=\left|\frac{232475-216825,6}{40}\right|
$$

$$
\sigma_{i}^{2}=391.235
$$

$$
r_{11}=\left|\frac{k}{k-1}\right|\left|1-\frac{\sum \sigma_{i}^{2}}{\sigma_{t}^{2}}\right|
$$

$$
r_{11=\left|\frac{40}{39}\right|\left|1-\frac{93,95}{391,23}\right|}
$$

$$
r_{11}=(1,02)(1-0,24)
$$

$$
r_{11}=0,775
$$

From the computation above, it is found out that $r_{11}$ (the total of reliability test) is 0.775 , whereas the number of subjects is 20 and the critical value for
$r$-table with significance level $5 \%$ is 0,312 . Thus, the value resulted from the computation is higher than its critical value. It could be concluded that the instrument used in this research is reliable.
3) Degree of the Test Difficulty

The following computation of the level difficulty for the item number 1 and for the other items would use the same formula.

Degree of the Test Difficulty $=\frac{\text { mean }}{\text { maximum score that decided }}$ In which,

Mean $=\frac{\text { the number of score participant test in each certain item }}{\text { the number of participant test }}$

Method to interpret degree of the test difficulty below:

Table 5.
The Interpretation of Degree of the Test Difficulty

| Bigness of DD | Interpretation |
| :---: | :---: |
| Less of 0,30 | Very difficult |
| $0,30-0,70$ | Medium |
| More than 0,70 | Very easy |

The following is the example of item degree of the test difficulty computation for item number 1 and for the other items would use the same way.

Table 6.
Table of Degree of the Test Difficulty Computation for Item
Number 1:

| No | Code | X |
| :---: | :---: | :---: |
| 1 | TO-1 | 5 |
| 2 | TO-2 | 5 |
| 3 | TO-3 | 5 |
| 4 | TO-4 | 5 |
| 5 | TO-5 | 5 |
| 6 | TO-6 | 5 |
| 7 | TO-7 | 5 |
| 8 | TO-8 | 5 |
| 9 | TO-9 | 5 |
| 10 | TO-10 | 5 |
| 11 | TO-12 | 5 |
| 12 | TO-13 | 5 |
| 13 | TO-14 | 5 |
| 14 | TO-15 | 5 |
| 15 | TO-16 | 5 |
| 16 | TO-18 | 5 |
| 17 | TO-19 | 5 |
| 18 | TO-20 | 5 |
| 19 | TO-21 | 5 |
| 20 | TO-23 | 5 |
| 21 | TO-11 | 0 |
| 22 | TO-17 | 0 |
| 23 | TO-22 | 0 |
| 24 | TO-24 | 0 |
| 25 | TO-25 | 5 |
| 26 | TO-26 | 0 |
| 27 | TO-27 | 0 |
| 28 | TO-28 | 5 |
| 29 | TO-29 | 5 |
| 30 | TO-30 | 0 |
| 31 | TO-31 | 5 |

| No | Code | X |
| :---: | :---: | :---: |
| 32 | TO-32 | 0 |
| 33 | TO-33 | 5 |
| 34 | TO-34 | 5 |
| 35 | TO-35 | 5 |
| 36 | TO-36 | 0 |
| 37 | TO-37 | 0 |
| 38 | TO-38 | 0 |
| 39 | TO-39 | 0 |
| 40 | TO-40 | $\mathbf{5 0}$ |
| Sum | $\mathbf{4 0}$ | $\mathbf{1 4 0}$ |

$$
\begin{aligned}
& \text { Mean }=\frac{\text { the number of score participant test in each certain item }}{\text { the number of participant test }} \\
& \qquad \begin{aligned}
& \text { Mean }=\frac{140}{40} \\
& \text { Mean }=3,5 \\
& \mathrm{D}=\frac{\text { mean }}{\text { maximum score }} \\
& \mathrm{D}=\frac{3,5}{5} \\
&=0,7
\end{aligned}
\end{aligned}
$$

From the computation above, the question number 1 can be said as the medium category, because the calculation result of the item number 1 is in the interval $0.7<\mathrm{D} \leq 1$
4) Discriminating Power

The formula that used in discriminating power computation as follow:

$$
D P=\frac{M A-M B}{\text { Maximum Score }}
$$

In which:
$M A=\frac{\sum x_{A}}{N_{A}}$ and $M B=\frac{\sum x_{B}}{N_{B}}$
In which:
$D P \quad$ : Discriminating Power
$M A \quad$ : The average from upper group
$M B \quad$ : The average from lower group
$N_{A} \quad:$ The number of student in upper
group
$N_{B} \quad:$ The number of student in lower group

The way to interpret discriminating power according to Anas Sudjiono as follow:

Table 7.
Interpretation of Discriminating Power

| Bigness of DP | Classification |
| :---: | :---: |
| Less of 0,20 | Poor |
| $0,20-0,40$ | Satisfactory |
| $0,40-0,70$ | Good |
| $0,70-1,00$ | Excellent |
| Negative sign | Thrown item |

The following is the computation of the discriminating power for item number 1, and for other items would use the same way. Before computed using the formula, the data divided into 2 groups. They were upper group and lower group.

Table 8.
The Table of the Gathered Score of Item Number 1.

| Upper Group |  |  | Lower Group |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No | Code | Score | No | Code | Score |
| 1 | TO-1 | 5 | 21 | TO-11 | 0 |
| 2 | TO-2 | 5 | 22 | TO-17 | 0 |
| 3 | TO-3 | 5 | 23 | TO-22 | 0 |
| 4 | TO-4 | 5 | 24 | TO-24 | 0 |
| 5 | TO-5 | 5 | 25 | TO-25 | 5 |
| 6 | TO-6 | 5 | 26 | TO-26 | 0 |
| 7 | TO-7 | 5 | 27 | TO-27 | 0 |
| 8 | TO-8 | 5 | 28 | TO-28 | 5 |
| 9 | TO-9 | 5 | 29 | TO-29 | 5 |
| 10 | TO-10 | 5 | 30 | TO-30 | 0 |
| 11 | TO-12 | 5 | 31 | TO-31 | 5 |
| 12 | TO-13 | 5 | 32 | TO-32 | 0 |
| 13 | TO-14 | 5 | 33 | TO-33 | 5 |
| 14 | TO-15 | 5 | 34 | TO-34 | 5 |
| 15 | TO-16 | 5 | 35 | TO-35 | 5 |
| 16 | TO-18 | 5 | 36 | TO-36 | 0 |
| 17 | TO-19 | 5 | 37 | TO-37 | 0 |
| 18 | TO-20 | 5 | 38 | TO-38 | 0 |
| 19 | TO-21 | 5 | 39 | TO-39 | 0 |
| 20 | TO-23 | 5 | 40 | TO-40 | 5 |
| Sum | $\mathbf{2 0}$ | $\mathbf{1 0 0}$ | Sum | $\mathbf{2 0}$ | $\mathbf{4 0}$ |

$$
\begin{gathered}
M A=\frac{\sum X_{A}}{N_{A}} \quad M A=\frac{100}{20}=5 \\
M B=\frac{\sum X_{B}}{N_{B}} \quad M B=\frac{40}{20}=2,0 \\
D P=\frac{M A-M B}{\text { Maximum Score }} \\
D P=\frac{5-2,0}{5} \\
D P=0,6
\end{gathered}
$$

So, the discriminating power for item number 1 is good.

## b. The data analysis of pretest value of the experimental class and the control class

Table 9.
The List of Pretest Value of the Experimental and Control Class

|  | EXPERIMENTAL CLASS |  |  | CONTROL CLASS |  |  |  |  |

|  |  | 2250 | 10 | 100 |  |  |  |  |

1) The Normality Pre-test of the Experimental Class

The normality test is used to know whether the data obtained is normally distributed or not. Based on the table above, the normality test:

## Hypothesis:

Ha: The distribution list is normal.
Ho: The distribution list is not normal
Test of hypothesis:
The formula is used:

$$
X^{2}=\sum_{i=1}^{k} \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}
$$

The computation of normality test:
$\mathrm{N}=35 \quad$ Length of the class $=6$
Maximum score $=85 \quad \sum x=2250$
Minimum score $=40 \quad \bar{x}=$
64.29
$\mathrm{K} /$ Number of class $=8 \quad$ Range $=46$

Table 10.
Frequency Distribution

| Class |  |  | $f_{i}$ | $X_{\mathrm{i}}$ | $X_{\mathrm{i}}^{2}$ | $f_{i} \cdot X_{\mathrm{i}}$ | $f_{i} \cdot X_{\mathrm{i}}^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 40 | - | 48 | 6 | 43.91523 | 1928.547139 | 263.49 | 11571.3 |

| 66 | - | 74 | 7 | 70.40659 | 4957.087513 | 492.85 | 34699.6 |
| 75 | - | 83 | 5 | 79.23704 | 6278.508604 | 396.19 | 31392.5 |
| 84 | - | 92 | 4 | 88.06749 | 7755.883513 | 352.27 | 31023.5 |
| Total |  |  |  | 35 |  |  | 2261.1 | 152930.6.

$$
\begin{aligned}
\bar{X} & =\frac{\sum f_{i} x_{i}}{\sum f_{i}}=\frac{2261.13012}{35_{2}}\left(\boldsymbol{f}_{\boldsymbol{i}} \boldsymbol{x}_{\boldsymbol{i}}-\left(\sum \boldsymbol{f}_{\boldsymbol{i}} \boldsymbol{x}_{\boldsymbol{i}}\right)^{2}\right. \\
S^{2} & =\frac{\boldsymbol{n}(\boldsymbol{n}-\mathbf{1})}{64.29} \\
& \left.=\frac{35(152930.468)-\left(\frac{1}{2}\right)}{(351.13012}\right)^{2} \\
S^{2} & =163.45 \\
S & =12.78
\end{aligned}
$$

Table 11.

## Normality Pretest of the Experimental Class

| Class | Bk | $\mathrm{Z}_{\mathrm{i}}$ | $\mathrm{P}\left(\mathrm{Z}_{\mathrm{i}}\right)$ | LD | Ei | Oi | $\underline{\left(O_{i}-E_{i}\right)^{2}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 39.5 | -1.94 | 0.0263 |  |  |  |  |
| 40-48 |  |  |  | 0.4203 | 14.7 | 6 | 5.1564 |
|  | 48.3 | -1.25 | -0.3940 |  |  |  |  |
| 49 - 57 |  |  |  | 0.1826 | 6.4 | 5 | 0.3034 |
|  | 57.2 | -0.56 | -0.2113 |  |  |  |  |
| 58-65 |  |  |  | 0.2644 | 9.3 | 8 | 0.1700 |
|  | 66.0 | 0.13 | 0.0531 |  |  |  |  |
| $66-74$ |  |  |  | 0.2420 | 8.5 | 7 | 0.2551 |
|  | 74.8 | 0.82 | 0.2951 |  |  |  |  |
| $75-83$ |  |  |  | 0.1400 | 4.9 | 5 | 0.0020 |
|  | 83.7 | 1.51 | 0.4351 |  |  |  |  |
| 84-92 |  |  |  | 0.0512 | 1.8 | 4 | 2.7207 |
|  | 92.5 | 2.21 | 0.4863 |  |  |  |  |
|  |  |  |  |  | $\mathrm{X}^{2}$ | = | 8.6076 |

With $\alpha=5 \%$ and $\mathrm{dk}=6-1=5$, from the chisquare distribution table, obtained $X_{\text {table }}^{2}=11.07$. Because $X_{\text {count }}^{2}$ is lower than $X_{\text {table }}^{2}(8.61<$ 11.07). So, the distribution list is normal.
2) The Normality Pre-test of the Control Class

## Hypothesis:

Ho: The distribution list is normal.
Ha: The distribution list is not normal

## Test of hypothesis:

The formula is used:

$$
X^{2}=\sum_{i=1}^{k} \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}
$$

The computation of normality test:

| Maximum score $=80$ | N | $=30$ |
| :--- | :--- | :--- |
| Minimum score $=40$ | Range $=41$ |  |
| K / Number of class $=6$ | $\bar{x}$ | $=61.17$ |
| Length of the class $=7$ | $\sum x$ | $=1835$ |

Table 12.
Frequency Distribution

| Total |  |  | 30 |  |  | 1815 | 113213 |

$$
\begin{aligned}
\bar{X} & =\frac{\sum f_{i} \chi_{i}}{\sum f_{i}}=\frac{1815}{30}= \\
S^{2} & =\frac{n \sum f_{i} \chi_{i}^{2}-\left(\sum f_{i} \chi_{i}\right)^{2}}{n(n-1)} \\
& =\frac{30(113213.000)-(1815)^{2}}{(30-1)} \\
S^{2} & =109.80 \\
S & =10.48
\end{aligned}
$$

Table 13.
Normality Pretest of the Control Class

| Class | Bk | $\mathrm{Z}_{\mathrm{i}}$ | $\mathrm{P}\left(\mathrm{Z}_{\mathrm{i}}\right)$ | LD | Ei | fi | $\frac{\left(f_{i}-E_{i}\right)^{2}}{E_{i}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 39.5 | -2.07 | 0.0193 |  |  |  |  |
| 40-46 |  |  |  | 0.0615 | 1.8 | 4 | 2.520 |
|  | 46.5 | -1.40 | 0.0808 |  |  |  |  |
| $47-53$ |  |  |  | 0.1514 | 4.5 | 3 | 0.523 |
|  | 53.5 | -0.73 | 0.2322 |  |  |  |  |
| $54-60$ |  |  |  | 0.2424 | 7.3 | 9 | 0.331 |
|  | 60.5 | -0.06 | 0.4746 |  |  |  |  |
| 61-67 |  |  |  | 0.2526 | 7.6 | 6 | 0.328 |
|  | 67.5 | 0.60 | 0.7272 |  |  |  |  |
| 68-74 |  |  |  | 0.1712 | 5.1 | 4 | 0.251 |
|  | 74.5 | 1.27 | 0.8984 |  |  |  |  |
| 75-81 |  |  |  | 0.0754 | 2.3 | 4 | 1.332 |
|  | 81.5 | 1.94 | 0.9738 |  |  |  |  |
| $\chi^{2}=$ |  |  |  |  |  |  | 5.287 |

With $\alpha=5 \%$ and $\mathrm{dk}=6-3=3$, from the chisquare distribution table, obtained $X_{\text {table }}=7.81$. Because $X^{2}{ }_{\text {count }}$ is lower than $X^{2}$ table $(5.29<7.81)$. So, the distribution list is normal.
3) The Homogeneity Pre-Test of the Experimental Class and Control Class

## Hypothesis :

$$
\begin{aligned}
& H_{o}: \sigma_{1}^{2}=\sigma_{2}^{2} \\
& H_{A}: \sigma_{1}^{2} \neq \sigma_{2}^{2}
\end{aligned}
$$

## Test of hypothesis:

The formula is used:

$$
F=\frac{\text { Biggest variant }}{\text { Smallest variant }}
$$

Table 14.
The Data of the Research:

| Source of variation | Experimental class | Control class |
| :---: | :---: | :---: |
| Total score | 2250 | 1835 |
| N | 35 | 30 |
| X | 64.29 | 61.17 |
| Variant $\left(\mathrm{s}^{2}\right)$ | 163.45 | 109.80 |
| Deviation standard (s) | 12.78 | 10.48 |

Biggest variant $(\mathrm{Bv})=163.45$
Smallest variant $(\mathrm{Sv})=109.80$
Based on the formula, it is obtained:
$F=\frac{163,45}{109,80}=1.49$
With $\alpha=5 \%$ and $\mathrm{dk}=(35-1=34):(30-1=$ 29), obtained $F_{\text {table }}=1.83$. Because $F_{\text {count }}$ is lower than $F_{\text {table }}(1.49<1.83)$. So, Ho is accepted and the two groups have same variant / homogeneous.
4) The average similarity Test of Pre-Test of Experimental and Control Classes

Hypothesis:
Ho: $\mu_{1}=\mu_{2}$
На: $\mu_{1} \neq \mu_{2}$

## Test of hypothesis:

Based on the computation of the homogeneity test, the experimental class and control class have same variant. So, the t-test formula:

$$
\begin{array}{r}
t=\frac{\overline{x_{1}}-\overline{x_{2}}}{S \sqrt{\frac{1}{n_{1}}+\frac{1}{n_{2}}}} \\
S=\sqrt{\frac{\left(n_{1}-1\right) S_{1}^{2}+\left(n_{2}-1\right) S_{2}^{2}}{n_{1}+n_{2}-2}}
\end{array}
$$

Table 15.
The Data of the Research:

| Source of variation | Experimental class | Control class |
| :---: | :---: | :---: |
| Total score | 2250 | 1835 |
| N | 35 | 30 |
| X | 64.286 | 61.167 |
| Variant $\left(\mathrm{S}^{2}\right)$ | 163.445 | 109.799 |
| Deviation Standard (S) | 12.785 | 10.478 |

$$
\begin{aligned}
& S=\sqrt{\frac{\left(n_{1}-1\right) S_{1}^{2}+\left(n_{2}-1\right) S_{2}^{2}}{n_{1}+n_{2}-2}} \\
& t=\frac{\overline{x_{1}}-\overline{x_{2}}}{S \sqrt{\frac{1}{n_{1}}+\frac{1}{n_{2}}}}
\end{aligned}
$$

$$
s 2=\sqrt{\frac{(35-1) 163.4454+(30-1) 109.799}{35+30-2}}=11.779
$$

$$
\mathrm{t}=\frac{64.29-\frac{61.17}{11.779 \sqrt{\frac{1}{30}+\frac{1}{35}}}=1.064}{}
$$

With $\alpha=5 \%$ and $\mathrm{dk}=35+30-2=63$, obtained $t_{\text {table }}=$ 2,00 . Because $t_{\text {count }}$ is lower than $t_{\text {table }}(1.064<2.00)$. So, Ho is accepted and there is no difference of the pretest average value from both groups.

## c. The Data Analysis of Post-test Scores in Experimental Class and Control Class.

Table 16.

## The Value of the Post Test of the Experimental and Control Class

## 1) The Normality Post-Test of the Experimental Class

Based on the table above, the normality test:

## Hypothesis :

Ho : The distribution list is normal.
Ha : The distribution list is not normal.

## Test of hypothesis:

The formula is used:
$\chi^{2}=\sum_{i=1}^{k} \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}$
The computation of normality test:

| Maximum score $=90$ |  | N | $=35$ |
| :--- | :--- | :--- | :--- |
| Minimum score | $=50$ | Range$=40$ |  |
| K / Number of class | $=6$ | $\bar{x}$ | $=80,29$ |
| Length of the class | $=7$ | $\sum x$ | $=2810$ |

Table 17.
Frequency Distribution

| Class |  | $f_{i}$ | $X_{\mathrm{i}}$ | $X_{\mathrm{i}}^{2}$ | $f_{i} \cdot X_{\mathrm{i}}$ | $f_{i} \cdot X_{\mathrm{i}}^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 50 | -57 | 1 | 53.405 | 2852.045 | 53.405 | 2852.045 |
| 58 | - | 64 | 2 | 60.809 | 3697.745 | 121.618 |
| 65 | - | 71 | 3 | 67.809 | 4598.073 | 203.427 |
| 72 | -78 | 4 | 74.809 | 5596.400 | 299.236 | 223859.491 |
| 79 | - | 85 | 15 | 81.809 | 6692.727 | 1227.136 |
| 86 | - | 92 | 10 | 88.809 | 7887.054 | 888.091 |
| Total |  | 35 |  |  | 2798909.908 |  |

$$
\begin{aligned}
\bar{X} & =\frac{\sum f_{i} \chi_{i}}{\sum f_{i}}=\frac{2793}{35}= \\
S^{2} & =\frac{n \sum f_{i} \chi_{i}^{2}-\left(\sum f_{i} \chi_{i}\right)^{2}}{n} \\
& =\frac{35(n-1)}{35}(225688.807)-(2792.914)^{2} \\
S^{2} & =98.45 \\
S & =9.92
\end{aligned}
$$

## Table 18.

Normality Post Test of the Experimental Class

| Class |  | Bk | $\mathrm{Z}_{\mathrm{i}}$ | $\mathrm{P}\left(\mathrm{Z}_{\mathrm{i}}\right)$ | LD | Ei | Oi | $\left(O_{i}-E_{i}\right)^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $E_{i}$ |  |  |  |  |  |
|  |  |  | 49.5 | -3.10 | -0.4990 |  |  |  |  |
|  | - 57 |  |  |  | 0.0093 | 0.3 | 1 | 1.3895 |
|  |  | 57.3 | -2.32 | -0.4897 |  |  |  |  |
|  | - 64 |  |  |  | 0.0434 | 1.5 | 2 | 0.1526 |
|  |  | 64.3 | -1.61 | -0.4463 |  |  |  |  |
| 65 | - 71 |  |  |  | 0.1291 | 4.5 | 3 | 0.5109 |
|  |  | 71.3 | -0.90 | -0.3172 |  |  |  |  |
| 72 | - 78 |  |  |  | 0.2382 | 8.3 | 4 | 2.2572 |
|  |  | 78.3 | -0.20 | -0.0790 |  |  |  |  |
| 79 | - 85 |  |  |  | 0.2726 | 9.5 | 15 | 3.1221 |
|  |  | 85.3 | 0.51 | 0.1937 |  |  |  |  |
|  | - 92 |  |  |  | 0.1935 | 6.8 | 10 | 1.5368 |
|  |  | 92.3 | 1.21 | 0.3872 |  |  |  |  |
|  |  |  |  |  |  | $x^{2}$ | = | 8.9692 |

With $\alpha=5 \%$ and $\mathrm{dk}=6-3=3$, from the chisquare distribution table, obtained $X_{\text {table }}^{2}=11.07$. Because $X^{2}$ count is lower than $X_{\text {table }}^{2}(8.96<$ 11.07). So, the distribution list is normal
2) The Normality Post-Test of the Control Class Hypothesis:

Ho : The distribution list is normal
Ha : The distribution list is not normal

## Test of hypothesis:

The formula is used:

$$
\chi^{2}=\sum_{i=1}^{k} \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}}
$$

The computation of normality test:

| Maximum score $=75$ | N | $=30$ |  |
| :--- | :--- | :--- | :--- |
| Minimum score | $=40$ | Range $=35$ |  |
|  |  | $\bar{x}$ | $=61,50$ |
| K / Number of class | $=6$ |  | $=1845$ |

Table 19.
Frequency Distribution

| Class |  |  | $f_{i}$ | $X_{\mathrm{i}}$ | $X_{\mathrm{i}}{ }^{2}$ | $f_{i} \cdot X_{\mathrm{i}}$ | $f_{i} \cdot X_{\mathrm{i}}{ }^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 40 | - | 47 | 3 | 43.500 | 1892.250 | 130.500 | 5676.750 |
| 48 | - | 55 | 4 | 51.500 | 2652.250 | 206.000 | 10609.000 |
| 56 | - | 63 | 11 | 59.500 | 3540.250 | 654.500 | 38942.750 |
| 64 | - | 71 | 10 | 67.500 | 4556.250 | 675.000 | 45562.500 |
| 72 | - | 79 | 2 | 75.500 | 5700.250 | 151.000 | 11400.500 |
| 80 | - | 87 | 0 | 83.500 | 6972.250 | 0.000 | 0.000 |
| Total |  |  | 30 |  |  | 1817.000 | 112191.500 |

$$
\begin{aligned}
-\bar{X} & =\frac{\sum f_{i} x_{i}}{\sum f_{i}}=\frac{1817}{30}= \\
S^{2} & =\frac{n \sum f_{i} \boldsymbol{x}_{\boldsymbol{i}}^{2}-\left(\sum \boldsymbol{f}_{i} \boldsymbol{x}_{i}\right)^{2}}{n(n-\mathbf{1})} \\
& \left.=\frac{30(112191.500)-(1817.000)^{2}}{30}(1)-1\right) \\
S^{2} & =77.84 \\
S & =8.82
\end{aligned}
$$

Table 20.
Normality Post Test of the Control Class

| Class | Bk | $\mathrm{Z}_{\mathrm{i}}$ | $\mathrm{P}\left(\mathrm{Z}_{\mathrm{i}}\right)$ | LD | Ei | Oi | $\left(O_{i}-E_{i}\right)^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  | $E_{i}$ |
|  | 39.5 | -2.49 | -0.4937 |  |  |  |  |
| 40-47 |  |  |  | 0.0500 | 1.5 | 3 | 1.504 |
|  | 47.5 | -1.59 | -0.4437 |  |  |  |  |
| $48-55$ |  |  |  | 0.1920 | 5.8 | 4 | 0.537 |
|  | 55.5 | -0.68 | -0.2518 |  |  |  |  |
| $56-63$ |  |  |  | 0.3414 | 10.2 | 11 | 0.056 |
|  | 63.5 | 0.23 | 0.0897 |  |  |  |  |
| $64-71$ |  |  |  | 0.2818 | 8.5 | 10 | 0.283 |
|  | 71.5 | 1.13 | 0.3715 |  |  |  |  |
| $72-79$ |  |  |  | 0.1079 | 3.2 | 2 | 0.472 |
|  | 79.5 | 2.04 | 0.4793 |  |  |  |  |
| 80-87 |  |  |  | 0.0191 | 0.6 | 0 | 0.572 |
|  | 87.5 | 2.95 | 0.4984 |  |  |  |  |
|  |  |  |  |  | $\chi^{2}$ | = | 3.423 |

With $\alpha=5 \%$ and $\mathrm{dk}=6-3=3$, from the chi-
square distribution table, obtained $X_{\text {table }}^{2}=7.81$.
Because $X^{2}$ count is lower than $X^{2}$ table $(3.42<7.81)$.
So, the distribution list is normal.
3) The Homogenity Post-Test of the Experimental and Control Class.

## Hypothesis :

$$
\begin{aligned}
& H_{o}: \sigma_{1}^{2}=\sigma_{2}^{2} \\
& H_{A}: \sigma_{1}^{2} \neq \sigma_{2}^{2}
\end{aligned}
$$

## Test of hypothesis:

The formula is used:
$F=\frac{\text { Biggest variant }}{\text { Smallest variant }}$

Table 21.
The Data of the Research:

| Source of <br> variation | Experimental class | Control class |
| :---: | :---: | :---: |
| Total score | 2810 | 1845 |
| N | 35 | 30 |
| - <br> X | 80.286 | 61.500 |
| Variant | 98.445 | 77.845 |
| Deviation <br> standard | 9.922 | 8.823 |

Biggest variant $(\mathrm{Bv})=98.445$
Smallest variant $(\mathrm{Sv})=77.845$
Based on the formula, it is obtained:
$F=\frac{90,45}{77,84}$
$F=1.265$
With $\alpha=5 \%$ and $\mathrm{dk}=(35-1=34)$ : $(30-$
1=29), obtained $F_{\text {table }}=1.832$. Because $F_{\text {count }}$ is lower than $F_{\text {table }}(1.265<1.832)$. So, Ho is accepted and the two groups have same variant/ homogeneous

## 2. The Hypothesis Test

The hypothesis in this research namely there is a significant difference in unlocking the meaning of words achievement score between students taught using words structure clues strategy and those taught without using words structure clues strategy.

In this research, because $\sigma_{1}{ }^{2}=\sigma_{2}{ }^{2}$ (has same variant), the t -test formula is as follows:

$$
t=\frac{\bar{X}_{1}-\overline{X_{2}}}{S \sqrt{\frac{1}{n_{1}}+\frac{1}{n_{2}}}} \quad S=\sqrt{\frac{\left(n_{1}-1\right) S_{1}^{2}+\left(n_{2}-1\right) S_{2}^{2}}{n_{1}+n_{2}-2}}
$$

The data of the research:

$$
\begin{array}{lll}
\overline{x_{1}} & =80.29 & \overline{x_{2}} \\
=61.50 \\
\mathrm{~S}_{1}^{2} & =98.45 & \mathrm{~S}_{2}^{2} \\
\mathrm{n}_{1} & =35 & \mathrm{n}_{2}
\end{array}=37.84
$$

| s | $=\sqrt{\frac{(35-1) 98.445+(30-1) 77.845}{35+23-2}}=9.4320$ |
| ---: | :--- |
| t | $=\frac{80.29-2}{9.432 \sqrt{\frac{1}{35}+\frac{1}{30}}}=8.005$ |

From the computation above, the $t$-table is 1.67 by $5 \%$ alpha level of significance and $\mathrm{dk}=35+30-2=63$. T-value was 8.005 . So, the $t$-value was higher than the critical value on the table ( $8.005>1.67$ ).

From the result, it can be concluded that there is a significant difference in words structure clues achievement between students were taught by using words structure clues and those were not taught by using words structure clues. The hypothesis is accepted.

## C. Discussion of the Research Findings

1. The score of Pre test

Based on the calculations of normality and homogeneity test from class TBI 3A as the experimental class and class TBI 3B as the control class is normal distribution and homogeneous.
2. The score of post test

The result of the research showed that the experimental class (the students who were taught using words structure clues strategy) had the mean value 80.29. Meanwhile, the control class (the students who were taught without using words structure clues strategy) had the mean value 61.50 . It can be said that understanding the meaning of words achievement to improve reading quality by using words structure clues of experimental class is higher than the control class.

On the other hand, the test of hypothesis using t-test formula shows the value of the t -test is higher than the critical value, $t_{\text {count }}>t_{\text {table }}\left(t_{\text {count }}\right.$ higher than $\left.t_{\text {table }}\right)$. The value of t -test is 8.005, while the critical value on $t_{s 0,05}$ is 1.67 . It means that there is a significant difference in understanding the meaning of words achievement between students taught using words structure clues strategy and those taught without words structure clues strategy. In this case, the use of words structure clues strategy is necessary needed to unlock the meaning of word to improve students' reading quality.

## D. Limitation of the Research

The writer realizes that this research had not been done optimally. There were constraints and obstacles faced during the research process. Some limitations of this research are:

1. Relative short time of research makes this research could not be done maximum.
2. The research is limited at IAIN Walisongo Semarang, specifically at ELT Department at Tarbiyah and Teacher Training Faculty. So that when the same research will be gone in other university, it is still possible to get different result.
3. The implementation of the research process was less smooth, this was more due to lack of experience and knowledge of the writer.

Considering all those limitations, there is a need to do more research about improving reading quality to unlock the meaning of words by using words structure clues strategy. So that, the more optimal result will be gained.
